nbn™ speed tier	nbn™ 25 ^A Standard Evening Speed	nbn™ 50 ^A Standard Plus Evening Speed	nbn™ 100 ^A Premium Evening Speed
Typical evening speed (7pm – 11pm)*	21Mbps	42Mbps	82Mbps
Our usage recommendation	Good for 1 – 2 people using at once	Great for families where up to 4 people are using at the same time	Best for large, busy households with 5 or more using at the same time or for those that simply want the fastest speed we offer
	Streaming movies together, browsing online and using social media.	Streaming separately, browsing online, and watching movies in 4K and online gaming.	Connecting many devices at once, streaming video on several devices & responsive online gaming

^AThis represents the maximum possible speed that is available during off-peak periods.

*This is the typical evening period download speed that the average consumer can expect to receive between 7pm and 11pm. Please be aware that these speeds aren't a guaranteed minimum and you may experience lower speeds during this period and at other times.

If you're connecting to the nbn™ using FTTB/FTTN/FTTC technologies then we'll check your maximum line speed after your service is activated. If the maximum line speed at your address doesn't support the speed tier of the plan you've chosen, we'll let you know. We may change your plan to one that's more suitable to make sure that you're not paying more for speeds you can't achieve and refund you the difference.

Factors that may affect your nbn™ speed and performance

The actual nbn™ speeds that you experience can be affected by a large number of factors – ranging from the technology that is used to connect you to the nbn™, modem type and positioning, the quality of your in-home wiring, your selected plan, the number of people and devices using connection at the same time, content accessed, internet traffic demand, the capacity in our network and possible interference or range issues affecting your Wi-Fi. There are ways you might be able to reduce the impacts of these factors, such as the location you select to position your modem and the Wi-Fi band you choose to connect with. You can learn more about these factors and how you might be able to reduce the impact of these at: <https://goo.gl/tcbDrN>

Important information about medical & security alarms and devices

If you currently use a medical or security alarm that is connected with your phone line we recommend that you contact your alarm or device provider to check if your device is compatible to work on the nbn™. Some devices will no longer work on the nbn™ and your medical or security alarm provider should be able to discuss alternative options with you if this is the case.

Important information about Battery Back-up

We don't supply a Battery Back-up service – this means that in the event of a power outage you will be unable to access the internet through your nbn™ service – in this situation you'll need to rely on your mobile service.
