SARS-CoV-2 Antigen Self Test Nasal
Quick Reference Guide for Patients

This guide is a reference for using the SARS-CoV-2 Antigen Self Test Nasal. It is essential that you read the Instructions for Use for patients before using this test.

For best performance, it is recommended this test be used within 7 days post-onset of symptoms.

### 1 Preparing for a test
1. Carefully read the Instructions for Use for patients before using this test.
2. Wash your hands with soap and water or use a hand sanitizer before performing the test.

### 2 Collecting and preparing nasal sample
1. Open the foil pouch
2. Hold the tube upright above the circular well marked on the picture below (not over the rectangular area). Place the tube in the tube holder.
3. Check the expiry date on the back of the foil pouches. Do not use the test if the expiry date has passed.
4. Open one of the foil pouches by tearing along the tear-line and take out the test device and the desiccant package.
5. Ensure that the test device is intact and that there are no green beads in the desiccant package. Do not open the desiccant package.

### 3 Performing a test
1. Place the test device on a flat surface.
2. Hold the tube upright above the circular well marked on the picture below (not over the rectangular result window).
3. Drop exactly 4 drops onto the circular well. Gently squeeze the sides of the tube together if necessary.
4. Set the timer and read the test result after 15 to 30 minutes.

### 4 Interpreting results
- **Invalid test result:**
  - If a control line (C) is not visible, the test must be considered invalid.
  - The test is not working correctly and you should perform another test using a different test kit.
  - You may have performed the test incorrectly. Carefully read the Instructions for Use and repeat the test. If your test result is still invalid, please contact your doctor or a COVID-19 test center.

- **Positive test result:**
  - If a test line (T) is visible together with a control line (C), this means that the result is positive.
  - Look carefully at the results. The test should be considered positive if two lines are visible - even if they are faint.
  - A positive test result means it is very likely that you have COVID-19. Please go directly to obtain a laboratory PCR test.
  - If you have COVID-19, please seek care by contacting your State and Territory COVID Support Services.

- **Negative test result:**
  - If a control line (C) is visible (regardless of how faint it is) and a test line (T) is not visible, this means that the result is negative.
  - It is unlikely that you have COVID-19.
  - However, even if your test is negative, continue to observe all hygiene and safety measures.
  - If you suspect that you have an infection (i.e., if you have prolonged symptoms or if your symptoms are worsening), contact your doctor/primary care physician. You may have another infection, or your test result may be false. You may repeat the test after 1-2 days, as COVID-19 cannot be detected with complete accuracy during all stages of an infection.

### Components of the test kit
- Pouch 1 containing a test device and a desiccant package (x5)
- Pouch 2 containing 5 tubes with liquid and 5 nozzle caps (x1)
- Sterile swab
- Tube holder
- Materials required but not provided:
  - Timer
  - Tissue

### Important safety information
- Wash your hands with soap and water or use a hand sanitizer before and after performing the test.
- Keep the swab clean. Avoid touching the tip of the swab and ensure that it does not come into contact with any surfaces prior to use.
- Use the test kit only once.
- Avoid contact with skin and eyes. In case of accidental contact, rinse well in order to avoid skin irritations. In case of concerns, consult your doctor. In the event of a spillage, ensure that it is cleaned thoroughly using a suitable disinfectant.
- Do not use any of the test components in the body with the exception of the swab included in the kit. Do not wash any of the components.
- Use the test immediately after opening the pouch (if not used immediately, the test must be used within 1 hour after opening).
- Dispose of the kit components in your household waste (not recycling) or according to your local guidelines. Remaining liquid in the tube should not be released into the drainage system or water bodies.
