

FORTIS

SILICONE SAFETY BIKE LIGHTS – White & Red FSBIK2PSILA

INSTRUCTIONS

- Position your lights on your bike securely. The front light should be attached to the handlebar, and the rear light should be attached to the seat post.
- There are two loops of flexible silicon – loop them around the handlebar and seat post, then attach to each other using the clip provided.
- To operate the lights, press the top flat side of the light until the button clicks. Press the button again to cycle through the various light modes. (Constant, steady flash, quick burst, off)
- To change the batteries (2 x CR2032), remove the silicone body from the light unit, then lift the battery cap away and replace batteries. Then press the battery cap back into place until it clicks, then stretch the silicone body back over the light unit.
- Please recycle old batteries.
- Battery life varies depending on conditions of use and storage.

SAFETY

- Turn lights off when not in use.
- Do not leave the lights loose, or in reach of children.
- Do not shine lights directly into eyes.
- If the lights break for whatever reason, please dispose of and replace.
