Tare

Tare or unladen weight is the weight of the container itself. Use this function to determine net weight of food separate from container.

Place container on scale	Press "TARE" to set weight to 0. Add food to determine weight of food.	Press "TARE" once container removed to reset weight to 0.

Changing units

		Under weight mode, press the unit key to choose unit of weight. The key is on the back of the scale. Note: You must set the unit before weighing.
