

4-in-1 Bluetooth Car Kit with Extra Socket KABLU41SOCA Quick Start Guide

Thank you for purchasing this product. Please read this guide fully before use in order to get the maximum benefit from the device.

Introduction

This Bluetooth car charger can switch from music to a hands-free phone call as long as your mobile phone has bluetooth functionality. When the call is finished, the music will resume automatically.

Product Layout

1. Dual USB output with 5V/2.1A & 5V/1.0A
2. Power indicator light
3. Cigar lighter port (12-24V) max 4A output
4. Microphone
5. Play/pause/answer phone/hang up/Power ON/Power OFF
6. Next song/frequency down
7. Previous song/frequency up
8. LED display window
9. Power adaptor 9V/24V

Product Features

- LED Display window
- Hands-free bluetooth
- Bluetooth stereo music
- Call echo cancellation and noise reduction technology
- Dual USB output, total output 5V/3.1A
- Bluetooth stereo and FM transmitter
- Automatic memory function in case of power failure

Operation Instructions

Plug the device into your car cigarette lighter socket and power on the car. Adjust the frequency on the bluetooth device, then tune your car radio to the same frequency. You will then be able to play music from your phone directly through your car speakers.

Adjustment of transmitter frequency: Hold down the “CH-” or “CH+” key to enter the fast frequency modulation. The LED display will flash once you release the key. At this point, you can tap “CH-” or “CH+” to adjust the frequency from 87.5 - 108MHZ.

Hold down the Power Button (5) for 3 seconds to turn bluetooth ON or off.

If your phone is connecting to the bluetooth device for the first time, then it will need to be paired. Please refer to your phone manual for bluetooth instructions specific to your handset.

1. Enable the Bluetooth function on your phone while the bluetooth hands-free is on and find the “car kit” device in the list of available devices.
2. Select “car kit” device.
3. The phone should pair to the bluetooth device successfully. From this point onwards, your phone should pair automatically with the bluetooth device unless another device connects to it in the meantime.

Hands-free Calls

Please note: you should NEVER touch your phone while your car is in motion. If you need to initiate a call, pull your car safely over to the roadside and turn on your hazard lights to alert other motorists.

Making a call

Dial the number by pressing the phone number as you would normally dial someone on your phone, and the audio will play over your car speakers.

Answering a call

If there is an incoming call, any music playing will stop and your ringtone will play over the car speakers. Press the Power Button (5) to answer the call. Once you have finished your call, you can press the Power Button again to hang up.

Rejecting a call

If you wish to reject the incoming phone call, simply hold down the Power Button (5).

Call back

To call the most recently dialed number back, tap the Power Button (5) twice.

Music Playback

This device supports A2DP functionality, which allows you to play music from your phone. The music will be transmitted to your car audio via the FM function. Once your phone is connected to the device via bluetooth, simply choose the bluetooth sound output mode on your phone.

Product Specifications

Rated working voltage	12V
Limited working voltage	9-26V
USB output	5V/3.1A
Working temperature	0-50C
SNR	>60dB
Degree of distortion	<0.1%
Frequency response	20Hz - 15KHz

Product Warnings

- The transmission volume of the device is fixed. Please adjust the volume of music/call playback via your mobile phone and the car stereo volume controls.
- A built-in antenna is included in this product. Please avoid using frequencies that match broadcasting radio stations for clearer audio playback.
- Please refer to your mobile phone manual in regards to specific instructions regarding the use of Bluetooth connections.
- This product is compatible with over 95% of phones on the market, however some may still have compatibility issues.
- Avoid using the device in extremely hot or humid areas, and avoid dropping or shaking the device.
- Do not attempt to disassemble the device yourself. There are no user-serviceable parts inside.

Troubleshooting

Problem	Suggested Solution
Unit will not work or power up	Check that the unit is plugged in correctly to your car's 12V port. Check the port for rust. If the unit still will not power up, check another device in the 12V port. The fuse may have blown.
Playback failure	Please ensure that the volume of the phone and of the car radio are both up above 0.
Muting but no voice is heard	Check the volume of the car radio.
No sound coming from the car radio	Check to ensure that the device is transmitting at the same frequency as the car radio is tuned into.
Transmission is not good/noisy	Check to see if the preset channel you are using is clashing with an already established radio station. Try tuning both the radio and the device into another frequency.
