## Overview

The Kogan Oxi-Vac Cork keeps your wine fresh for longer with just several quick, short pumps. The Wine Stopper is airtight and safely allows you to store your wine horizontally if you choose. The date dial on the top marks the date of uncorking.

## Operation

To use:

1. Place the stopper over the bottle opening (the stopper fits standard wine bottle necks).
2. Push the stopper down several times to extract the air out of the bottle until the date number is visible in the stopper's window.
3. Turn the dial to mark the date of sealing. Store the bottle in the refrigerator to prolong the life of your wine.
4. When opening, remove the stopper by gently moving it left and right, then pull it up after a swishing.
