

Garage Door Remote Quick Start Guide

WARNING:

CHOKING HAZARD - Small parts and batteries. Not for children. Use with adult supervision only

Pairing your controller

This controller is a learning remote, so it should be able to pair with any compatible garage door models with a minimum of problems. Please follow the basic pairing instructions that came with your garage door.

Basic Pairing Method

This is the basic method to pairing units. In most cases these steps should successfully pair the remote to your doors.

1. Press and hold the pairing button on your garage door receiver unit. The LED light on the receiver should flash.
2. Press and hold the transmitter button on the remote that you would like to use to control the garage door for two seconds. The LED light on the receiver may start to flash faster.
3. Release the transmitter button on the remote and wait for two seconds. Then press the same transmitter button again for two seconds. The LED light should stop flashing and stay lit for a short time, then go out.
4. Release the pairing button on the receiving unit of your garage door.
5. Press the transmitter button on the remote control to test that it is operating correctly.

If you have any issues with pairing the units, please refer to the instruction manual that came with your garage door. If you have any questions or concerns regarding the use of the remote control, please contact the Kogan.com customer support team.
