Operation Guide

Charging Power Bank via computer USB port

While charging, the power indicator shows the charging status as follows:

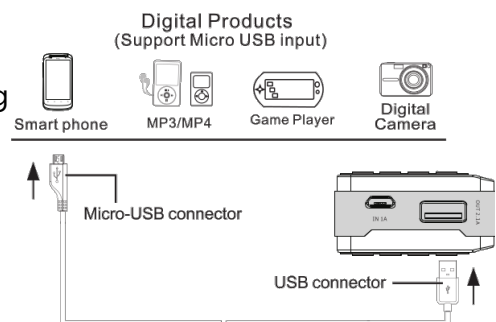

Charging other digital devices via the Power Bank

Use either the cable supplied or the original cable supplied with your digital device to connect to the power bank.

Notes:

- Check the charging voltage before charging your digital products. If the voltage of the power bank does not match the voltage of your digital device, it may damage it. The Power Bank will go into hibernation mode when the digital device is fully charged.
- To check the current battery level, press the power button once while the power bank is in switched off mode.
